

Help Restore Sharp Park!

Wild Equity, The Surfrider Foundation, the local community and other conservation groups are working together to create a National Park at Sharp Park.

Sharp Park National Park will:

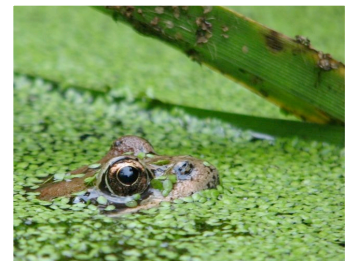

- Protect the beach from sea level rise by removing the seawall/berm in front of the lagoon.
- Enhance public access to the area thru new walking and biking trails.
- Restore the natural integrity of the lagoon and the beach as well as the habitat of its threatened and endangered species.

Endangered San Francisco
Garter Snake

Currently, Sharp Park Golf Course:

- Requires a protective seawall on a stretch of beach that is already overrun with seawalls.
- Relies on an engineered lagoon which prevents sand migration to/from the beach and damages the native ecosystem.

Threatened California Red-
legged Frog
